

## Air Permitting

UNCG is registered with the State of North Carolina's Air Permit Program as a Synthetic Minor for air emissions. UNCG operates five permitted stationary compression ignition internal combustion engines, as well as about 30 insignificant/exempt sources. Our Air Permitting Program is primarily handled by UNCG Facility Operations. UNCG EHS works in partnership with Facility Operations to provide assistance in this program by monitoring regulatory updates, performing plans review for new sources, and assisting in permit modification and renewal.
